Payment

Payment: The transfer of money from one individual or legal entity to another

- Cash
- Personal Cheques
- Money orders (Bank note)
- Credit cards
- Debit cards

- A major problem for online payments
- The merchant has no legal proof of purchase unless the buyer uses authentication certificate
- Companys such as Visa, PayPal and CyberCash (now VeriSign) are working to limit fraud:
 - Visa has established high risk business models and best practices info for merchants
 - Nochargeback.com has lists of fraudulent cards, e-mail addresses and postal addresses
 - VeriSign/CyberCash has employed AI to catch frauders

Phishing

Basic Structure:

- Attacker sends e-mail messages to a large number of recipients
- Message states that an account has been compromised and the matter should be corrected
- Message includes a link
- User enters a login name and password, which the perpetrator captures
- Once inside a victim's account, the perpetrator can access personal

information

Countermeasures

- Most important step that companies can take today is to educate Web site users
- Many companies contract consulting firms that specialize in anti-phishing work
- Anti-phishing technique is to monitor online chat rooms used by criminals

(enya ()

1. PayPal

- It's a digital payment system
- Digital cash via email
- Acts as a trusted third party (e.g. auction purchase)

To send money:

- Sender sets up an account and requests to send payment
- Sender places payment into the receivers account by credit-card
- Receiver is notified of payment via email
- Receiver can transfer funds to bank account or request a cheque

PayPal Cont...

- Charges a nominal fee for every transaction, and they have very strict policies, so it's a good idea to avoid any fraudulent or suspicious transactions.
- It enables people to buy and sell over the internet instantly using protected systems
- Transaction conducted between banks are
